Descriptive List of Statistics and Math Coursework

Hubert Luo

December 24, 2018

All the following courses were at the University of California, Berkeley.

1 Completed Coursework in Statistics

Major GPA: 3.97

1.1 Stat 151A: Linear Modelling

- Grade: A

- Instructor: Oscar Hernan Madrid Padilla

- Text Used: John Fox, *Applied Regression Analysis and Generalized Linear Models*

- Subject Matter: Linear and generalized linear models and their application. Linear regression, analysis of variance and covariance, random effects, design and analysis of experiments, quality improvement, log-linear models for discrete multivariate data, model selection, robustness, graphical techniques, in-depth case studies.

1.2 Stat 150: Stochastic Processes

- Grade: A-

- Instructor: Brett Kolesnik

- Texts Used: Rick Durrett, *Essentials of Stochastic Processes* and Mark A. Pinsky, *An Introduction to Stochastic Modeling*

- Subject Matter: Random walks, discrete and continuous time Markov chains, Poisson processes. Queueing theory, branching processes, renewal theory, Gaussian processes.

1.3 Stat 135: Concepts of Statistics

- Grade: A+

- Instructor: Hank Ibser

- Texts Used: John A. Rice, *Mathematical Statistics and Data Analysis* and Deborah Nolan, *Stat Labs: Mathematical Statistics through Applications*

- Subject Matter: Statistical theory and methodology. Descriptive statistics, maximum likelihood estimation, non-parametric methods, Optimality, goodness-of-fit tests, analysis of variance, bootstrap and computer-intensive methods and least squares estimation.

1.4   Stat 134: Concepts of Probability

- Grade: A+

- Instructor: Hank Ibser

- Text Used: Jim Pitman, *Probability*

- Subject Matter: Conditional expectation, independence, laws of large numbers. Discrete and continuous random variables. Central limit theorem. The Poisson process, Markov chains, characteristic functions.

1.5   Stat 133: Concepts in Computing with Data

- Grade: A+

- Instructor: Gaston Sanchez

- Subject Matter: Computationally intensive applied statistics. Data manipulation (wrangling, reshaping, tidying). Visualization and graphics. Programming concepts. Data technologies and reporting tools. Dynamic documents.

1.6   Stat C100: Principles and Techniques of Data Science

- Grade: A+

- Instructors: Josh Hug and Fernando Perez

- Text Used: Sam Lau, *Principles and Techniques of Data Science*

- Subject Matter: Statistical inference, measurement error, scalable data processing, machine learning algorthims. Programming for acquiring, transforming, querying and analyzing data.

1.7   Other Completed Statistics Coursework

- Stat C8 (Foundations of Data Science)

2   Completed Coursework in Mathematics

Major GPA: 4.0

2.1   Math 104: Analysis (Real Analysis I)

- Grade: A

- Instructor: Michael Pejic

- Text Used: Kenneth A. Ross, *Elementary Analysis: The Theory of Calculus*

- Subject Matter: The real number system. Sequences, limits, and continuous functions in $\mathbb{R}$ and $\mathbb{R}^n$. Metric spaces. Uniform convergence, interchange of limit operations. Infinite series. Mean value theorem and applications. The Riemann integral.

2.2   Math 110: Linear Algebra

- Grade: A

- Instructor: Zvezdelina Stankova

- Text Used: Stephen H. Friedberg, *Linear Algebra*

- Subject Matter: Matrices, vector spaces, linear transformations, inner products, determinants, operators. Eigenvectors, Cayley-Hamilton Theorem. Quadratic forms, Jordan canonical form, minimal polynomials, applications.

2.3   Math 113: Abstract Algebra

- Grade: A+

- Instructor: Alexander Paulin

- Text Used: Alexander Paulin, *Course Notes* (Link)

- Subject Matter: Sets and relations. The integers, congruences and the Fundamental Theorem of Arithmetic. Groups and their factor groups. Commutative rings, ideals and quotient fields. The theory of polynomials: Euclidean algorithm and unique factorizations. The Fundamental Theorem of Algebra. Fields and field extensions.

2.4   Math 128A: Numerical Analysis

- Grade: A

- Instructor: Jon Wilkening

- Text Used: Richard L. Burden, *Numerical Analysis*

- Subject Matter: Programming for numerical calculations, round-off error, approximation and interpolation, numerical quadrature, matrix computations, and numerical solutions of ordinary differential equations.

2.5   Other Completed Math Coursework

- Math 53 (Multivariable Calculus)

- Math 54 (Linear Algebra and Differential Equations)

- Math 55 (Discrete Math)

3   Other Relevant Coursework

3.1   Computer Science 188: Artificial Intelligence

- Grade: A+

- Instructors: Anwar Baroudi and Daniel Fried

- Text Used: Stuart Russell and Peter Norvig, *Artificial Intelligence: A Modern Approach*

- Subject Matter: Ideas and techniques underlying the design of intelligent computer systems. Search, game playing, knowledge representation, inference, planning, reasoning under uncertainty, machine learning, robotics, perception, and language understanding.

4 Current Coursework

4.1 Stat 154: Modern Statistical Prediction and Machine Learning

- Grade: In Progress

- Instructor: Bin Yu

- Text Used: Gareth James, *An Introduction to Statistical Learning*

- Subject Matter: Theory and practice of statistical prediction. Contemporary methods as extensions of classical methods. Optimal prediction rules, the curse of dimensionality, empirical risk, linear regression and classification, basis expansions, regularization, splines, the bootstrap, model selection, classification and regression trees, boosting, support vector machines. Computational efficiency versus predictive performance.

4.2 Math 170: Mathematical Methods for Optimization

- Grade: In Progress

- Instructor: Lawrence C. Evans

- Text Used: Joel N. Franklin, *Methods of Mathematical Economics*

- Subject Matter: Linear programming and a selection of topics from among the following: matrix games, integer programming, semidefinite programming, nonlinear programming, convex analysis and geometry, polyhedral geometry, the calculus of variations, and control theory.

4.3 Stat 152: Sampling Surveys

- Grade: In Progress

- Instructor: Elizabeth Purdom

- Text Used: Sharon L. Loh, *Sampling: Design and Analysis*

- Subject Matter: Theory and practice of sampling from finite populations. Simple random, stratified, cluster, and double sampling. Sampling with unequal probabilities. Properties of various estimators including ratio, regression, and difference estimators. Error estimation for complex samples.

4.4 Stat 158: Design and Analysis of Experiments

- Grade: In Progress

- Instructor: Samuel Pimentel

- Text Used: Gary W. Oehlert, *A First Course in Design and Analysis of Experiments*

- Subject Matter: Planning, conducting, and analyzing statistically designed experiments with an emphasis on hands-on experience. Standard designs studied include factorial designs, block designs, latin square designs, and repeated measures designs. Principles of design, randomization, ANOVA, response surface methodoloy, and computer experiments.
